
Distributed system

Finalità

The goal of the course is to provide a in-depth knowledge on the techniques and technologies of distributed systems and on their use for developing distributed software systems.

Programma

Introduction. Architecture and computing Models. Middleware. Synchronization and coordination. Replication. Fault Tolerance. Security. Modeling and simulation. Implementation technologies. Applications..

Attività d'esercitazione

Lab activities have the goal of providing a good knowledge on the use of some of the most known techniques and tools for the development of distribute systems.

Modalità d'esame

Student evaluation is based on a theoretical and a practical test

Propedeuticità

Ingegneria del Software A, Reti di Calcolatori. Basi di Dati.
